An outstanding three-phase routine where three selections are individually located by two Jokers via three very magical revelations.

The first selection visually appears between the two jokers as they are waved over the deck. The second selection is found as the two jokers travel from different parts of the deck to capture it. The third card is found by throwing the joker into the center of the deck -- where it is found resting beside the final selection.

This is more than just a trick. It is a baffling routine which will fool most magicians. Comes with a special card and an illustrated instruction booklet. Use your own deck (Poker Bicycle). Sleight-of-hand required.
