Beyond the moves, beyond the gimmicks, beyond the patter, there exists a handful of fundamental truths about the performance and creation of magic. After performing for more than a quarter of a century and creating hundreds of innovative magic routines, Jay Sankey has written a book exploring these same truths.

This thought-provoking collection of short pieces ranges from the technical and psychological to the philosophical and sociological, while also staying rooted in the heartfelt and practical. After reading just a handful of the passages, you will see the craft of magic in a whole new light.
