This is a great self working magic trick. When you receive the trick, simply follow the instructions and the tricks works itself on you. This trick was a complete sell out when first shown at the Blackpool Magic Convention, in stock now and ready for orders. A mentalist's dream, a self working card/coin trick that has a huge impact, selling on sight when demonstrated.

Five different coins are handed to a spectator along with a pack of cards. The magician places a prediction face down and requests that the spectator places the coins in a random order on the table. This done, the magician now deals a pile of cards in front of each coin according to its value (a 10p coin has 10 cards, 5p coin 5 cards etc). The top card of each pile is turned up and the prediction is revealed. The five face cards match perfectly with the prediction. We now offer a variety of versions of this great effect. The standard version is the prediction version as described above using regular coins and a prediction, The Royal Flush version, uses regular coins and simply reveals the five cards as a 'Royal Flush'. Both of these versions are now available with numbered Poker Chips instead of using coins. All versions work great, the more popular being the standard one using regular coins. Very easy to perform, you'll work this right away.
