There are two effects that can be performed with the props supplied.

Effect #1... A spectator selects a card. The Joker is used to find the card. First, the indices of the Joker jump around! Then one of them is pulled off and thrown towards the deck, when the deck is spread, the index is seen stuck to the back of the selection!

Effect #2... Two Jokers are freely shown and the magician demonstrates their wild abilities... The indices of the Jokers jump about, multiply and disappear! Both cards are left with the spectators to examine!

This routine is based on Martin Gardner's ingenious 'Five sided business card' from Karl Fulves' "The Chronicles". All I have done is adapt the routine to playing cards.
